

Delta Live tables (DLT) (DATE:/...../.....)

- * It is a declarative ETL framework
- * DLT pipeline automatically manages tasks orchestration, cluster management, monitoring, data quality & error handling
- * We can't create a streaming table on top of mat table (mat means materialized)

@dlt.table {
 → read → materialized view
 → readStream → streaming ~~materialized~~ view table

@dlt.view {
 → read → view
 → readStream → streaming view.
